### **black breeding pdf**

black breeding

Breeding activities are directly influenced by and are related to developments in society: required food production by animals and requirements of mankind for animals as companion and for leisure purposes. Breeding programs with cattle, pigs and poultry yielded sharp increases in the quantity of milk, meat or eggs.

black breeding

The black drongo (*Dicrurus macrocercus*) is a small Asian passerine bird of the drongo family *Dicruridae*. It is a common resident breeder in much of tropical southern Asia from southwest Iran through India and Sri Lanka east to southern China and Indonesia and accidental visitor of Japan. It is an all black bird with a distinctive forked tail and measures 28 cm (11 in) in length.

Breeding takes place in June and July, and parturition occurs in late January or February through out black bear range (Bunnell and Tait 1981). Black bears are promiscuous in breeding habits, although this trait apparently varies with local differences in bear density during the breeding season (Jonkel and Cowan 1971, Rogers 1977).
