The melting point (or, rarely, liquefaction point) of a substance is the temperature at which it changes state from solid to
liquid. At the melting point the solid and liquid phase exist in equilibrium. The melting point of a substance depends on
pressure and is usually specified at a standard pressure such as 1 atmosphere or 100 kPa.

Ice has also a symbolic and spiritual meaning, as it refers to you being frozen in your actions, thoughts or feelings, and it appears as a warning in your dream to tell you to thaw, soften and unwind. Ice can appear in very different forms in dreams, such as rivers of lake with a frozen surface, fear of freezing, hail, icebergs, frozen windows etc.

1.Blue ice Ice is a very weak absorber of light. As a consequence, when sunlight passes through a thin piece of ice, the volume looks almost white. However, a block of ice thicker than one metre appears blue to the eye [DU]. Ice can be thought of as a filter that gradually absorbs red, and in a minor degree, green light.
